Instructions and Disclaimer

Our Children’s Vision - Brien Holden Vision Institute Vision Screening Chart

The Brien Holden Vision Institute vision screening chart is designed to be used at 3 m. It is suitable for conducting vision screening in children and the wider community.

The chart can be downloaded and printed on a high contrast good quality laser printer using A4 size white paper of at least 80 gsm and cut to size along the dotted line. It should then be laminated in matte finish laminate to ensure longevity and to prevent reflections. If unavailable, gloss clear plastic laminate can be used but care must be taken when placing the chart to avoid glare and reflections.

Note:
As printers can vary, please check that the height of the 6/60 letter on the printed copy is 43.5 mm high and the 6/9 letters are 6.9 mm high.
